

Preliminary Task Module 2
DATA STRUCTURE – 2025/2026
"C++ Introduction : Subprogram & Array"

A. Preliminary Task Requirements

1. Preliminary Tasks are done **individually**.
2. This PT is **MANDATORY**, not doing PT = **REDUCTION JURNAL/ASESMENT TEST POIN**.
3. Only **SUBMITTING** PT but There's **NO WORK** in it = **REDUCTION JURNAL/ASESMENT TEST POIN**.
4. Submission Deadline PT Module 2 is **Monday, September 29th 2025 at 11.59 PM (West Indonesian Timezone)**.
5. **THERE'S NO TOLERANCE FOR LATE SUBMISSION, LATE OR NOT SUBMITTING PT IS CONSIDERED NOT DOING PT**.
6. **NO PLAGIARISM (PLAGIRISM = E)**.
7. Do PT as clear as possible so it can be understood easily.
8. File uploaded at LMS using **PDF** format with condition:
TP_MOD_[XX]_NIM_NAMA.pdf

CP (WA):

- Gandi (081999525056)
- Michael (085850507207)
- Sulthon (081272064805)
- Rezza (081244275318)

Have Fun^^

B. Preliminary task Question

Array and Subprogram

1. (Function Subprogram) Code and Run. Input number 45 and 40. Then input number 45 and 50. Screenshot the code and each of the run result, then put it in the answer sheet.

```
main.cpp
1  #include <iostream>
2
3  using namespace std;
4
5  int kendaraan(int kapasitas_kendaraan, int jumlah_penumpang) {
6      int jumlah;
7      jumlah = jumlah_penumpang / kapasitas_kendaraan;
8      if (jumlah_penumpang % kapasitas_kendaraan > 0) {
9          jumlah++;
10     }
11     return jumlah;
12 }
13
14 int main(){
15     int kap_kendaraan, jum_penumpang, banyak_kendaraan;
16     cout << "Masukkan kapasitas kendaraan: ";
17     cin >> kap_kendaraan;
18     cout << "Masukkan jumlah penumpang: ";
19     cin >> jum_penumpang;
20     banyak_kendaraan = kendaraan(kap_kendaraan, jum_penumpang);
21     cout << "Banyak kendaraan yang disewa " << banyak_kendaraan << endl;
22     return 0;
23 }
```

2. (Procedure Subprogram) Code and Run. Input 1 and 2. Screenshot the code and the run result, then put it in the answer sheet.

```

1  #include <iostream>
2
3  using namespace std;
4
5  void tukar(int *a, int *b) {
6      int temp;
7      temp = *a;
8      *a = *b;
9      *b = temp;
10 }
11
12 int main(){
13     int bil1, bil2;
14     cout << "Masukkan bilangan pertama: ";
15     cin >> bil1;
16     cout << "Masukkan bilangan kedua: ";
17     cin >> bil2;
18     cout << "Sebelum pertukaran:\n";
19     cout << "Bil 1: " << bil1 << " bil 2: " << bil2 << endl;
20     tukar(&bil1, &bil2);
21     cout << "Setelah pertukaran:\n";
22     cout << "Bil 1: " << bil1 << " bil 2: " << bil2 << endl;
23     return 0;
24 }

```

3. (Array) Code and Run. Screenshot the code and the run result, then put it in the answer sheet.

```

1  #include <iostream>
2
3  using namespace std;
4
5  int main(){
6      int bil[10];
7      bil[0] = 1;
8      bil[1] = 4;
9      bil[2] = 5;
10     cout << bil[0] << endl;
11     cout << bil[1] << endl;
12     cout << bil[2] << endl;
13     cout << bil[0] + bil[1] + bil[2] << endl;
14     return 0;

```

God Bless You^^
